

Structural Concepts' new, narrow-depth Harmony® display cases fit easily through standard 36" door openings.

The new Harmony® series from Structural Concepts is a line of narrow—less than 34" deep—bakery merchandising display cases, designed to glide easily through standard door openings. The line includes refrigerated and non-refrigerated service cases. Harmony also offers combination cases with an innovative baffle system that converts refrigerated display areas to non-refrigerated, creating the ultimate in merchandising flexibility.

Standard 36" door openings—common in most foodservice establishments—limit easy access for display cases. Structural Concepts' Harmony line offers these operators hassle-free installation. Operators can simply walk the fully assembled display case into their operation, without the need to dismantle the case or the doorframe. The Harmony line reflects Structural Concepts' dedication to developing quality display cases with innovations that answer the needs of its customers. Most importantly, the case designs don't sacrifice high-end appearance, features and options.

The Harmony line features lift-up, curved front glass, allowing for quick access to the display area and making replenishment quick and easy. All Harmony cases feature Structural Concepts' premier Breeze™ self-contained refrigeration system that easily slides out for service and maintenance; optional Clean Sweep™ technology sweeps away condenser coil-clogging dust and debris that compromises refrigeration performance.
